# WHO ARE WE?

*Rotaflow is a mid-size, premier full-service Engineering, Procurement, and Construction Management (EPCM) company. Located in Edmonton, Alberta with an office in Fort McMurray, AB, we specialize in fire protection and industrial utilities. For over 27 years, we've worked with the world's leading energy companies, including Suncor Energy, Gibsons, Husky, Cenovus, CNRL, Pembina Pipelines and Albian Sands.*

*Customers and market influencers see us as subject matter experts in executing Fire Protection Industrial Utility projects from concept through CSU to operation. Our team of over 100 engineers, designers, and trades work collaboratively to design, build, retrofit, repair, operate, and maintain systems, protecting life and assets and enabling companies to focus on their core business.*

As part of Rotaflow's initiative to better serve our clients with on-time and cost-effective solutions, in 2019 we started the process to obtain our ABSA certification for stainless steel and process piping fabrication.

As of October 2020, Rotaflow has received the Certificate of Authorization Permit with a handful of certified welders mobilized and ready to provide you with fabrication services.

With our network of vendors and our team of specialized welders, we have the capability to provide your time-sensitive projects with cost-effective solutions through all phases of the project.

Since receiving our certification, Rotaflow has completed several

projects that were completed in our warehouses in Fort McMurray and Edmonton with the capabilities to fabricate on-site as well. A recent project included the design and fabrication of an inergen gas rack for a clean agent fire protection system.

Our specialists designed an efficient and secure way to safely move, replace or refill tanks during regular inspections in a manner that has not been used on sites before.

*We appreciate the attention to detail and safe work practices your team has demonstrating.*

- Suncor, Fort Hills

*Every challenge was met head on with the primary focus being safety.*

- Suncor, Base Plant
